INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/04222

I. Basis	of the	report
----------	--------	--------

1. With regard to the elements of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

X1=US5446369

X2=US4780664

X3=C.G.Moore et al:"Instrumentation for measurement ..."

X4=JP59159061

X5=EP932037

DY6=US6383451

X7=JP1197629

X8=US3148348

X9=EP528554

PX10=US2003/029232 (the validity of the priority cannot be checked during preliminary examination. The relevance of the indications below with respect to PX10 should thus be considered with this proviso)

Y11=US4380763

Y12=US5338432

A13=Kim et al.: "Utilization of thin film electric resistance probe for ..."

A14=SU1085871

The subject matter of claim 1 is obvious from a combination of DY6 and X5:

DY6 (abstract, Fig.1) discloses all features of claim 1 except the feature that the tracks follow a path which includes a plurality of mutually inverted generally U-shaped bends, since the tracks follow a straight path in DY6.

In order to solve the obvious problem of reducing the size of the sensor it would be obvious for the skilled person to provide tracks following a path as defined in claim 1, since in electrical resistance sensors these paths are generally used to reduce the size of the sensors, see for example X5, col.9,l.43-47 and col.10,l.9-11.

In the above discussion document DY6 could be replaced by A13 or (as regards the interdigitated electrode sensors) by X7 and document X5 could be replaced by any of X2, X3 or X4.

INTERNATIONAL PRELIMINARY

EXAMINATION REPORT - SEPARATE SHEET

- The subject matters of dependent claims 2-20 are likewise not inventive: 2.
- 2: X2; X3; X4; X5; DY6; X7; PX10;
- 3: X2; X3; X4; X5; X7; PX10;
- 4: X2; X4; DY6; X7; X8; PX10
- 5: matter of design
- 6: X2; X3; X5
- 7: X1; X2; X3; X4; X5; DY6; X7 (from Fig.3,4 it is clear that track 13 serves both as anode and as resistance sensor); X8; PX10
- 8,9: X1; X2; X3 (page 3, 3rd para.); X8; PX10
- 10: matter of design
- 11: X1 (col.13,l.1,2); X2 (col.4,l.12-20); X7 (Fig.1-4)
- 12: X7 (Fig.1-4)
- 13: X1 (col.4,l.30-32)
- 14: X1 (col.13,l.17-23); X2 (col.3,l.5 or col.5,l.12 "steel"); X3 (page 2, penultimate para. "steel"); X5; X8 (col.1,l.13 "steel" and claim 1 "ferrous metal"); PX10 (para.[27]) 15: X1 (col.13,l.17-23)
- 16-19: X1 discloses that a plurality of sites are monitored in an installation (X1: for a second example col.1,I.56-58) and that the exposed sensor elements are fabricated with the same material as the structure of interest (X1: for example col.2,l.4-6); X9 (col.4,l.20ff; col.5,l.55-57); Y11 (col.2,l.16-26; col.4,l.4-7; col.5,l.10-52) 20: for example col.12,l.59 of X1; X9 (col.5,l.55-57); Y11
- The subject matter of the claims is obscured by contradicting passages of the 3. description:

Whereas dependent claim 13 defines in accordance with page 6,1.22 of the application, that the temperature sensor is a resistor, page 4, line 14 states in contradiction thereto that the temperature sensor is a thermocouple.

Whereas dependent claim 7 defines in accordance with page 6, line 12,13 and in accordance with the single electrode arrangement in Fig.1 that the sensor is an "electric resistance"-type sensor, page 4, line 13 and page 13,I.13 state in contradiction thereto. that the sensor is of the "linear depolarisation resistance"-type, which would require two electrodes.

5

CLAIMS

- 1. A microsensor for detecting corrosive media acting on a metallic material when mounted in situ adjacent a location in the metallic material, the microsensor including a plurality of corrosive tracks between common terminals, each of the tracks being exposed to the corrosive media and being formed as a patterned conductive thin film track following a path which includes a plurality of mutually inverted generally U-shaped bends.
- A microsensor according to claim 1, wherein each said corrosive track
 has a width which is substantially constant across its length.
 - A microsensor according to claim 1 or 2, wherein each said corrosive track is formed to meander across a surface portion of a common substrate.
 - 4. A microsensor according to claim 3, wherein each said surface portion comprises one of a set of linear corridors on the common substrate.
- 15 5. A microsensor according to any preceding claim, wherein the minimum separation between adjacent corrosive tracks is preferably at least as great as the average width of said corrosive tracks.
- A microsensor according to any preceding claim, wherein each said bend has a minimum radius of curvature which is greater than half the average width of said corrosive tracks.
 - 7. A microsensor according to any preceding claim, comprising a resistivity sensor having said plurality of comosive tracks arranged to provide a measurable variation in resistivity in response to prolonged exposure to corrosive media.
- 25 8. A microsensor according to claim 7, comprising a reference sensor arranged to provide a measurable variation in resistivity in response to changes in temperature, the reference sensor having a similar temperature dependence as said resistivity sensor.

15

- A microsensor according to claim 8, wherein the reference sensor takes substantially the same form as said resistivity sensor.
- 10. A microsensor according to claim 8 or 9, wherein said reference sensor is formed in an overlapping arrangement with said resistivity sensor.
- 5 11. A microsensor according to any preceding claim, comprising a galvanic sensor having at least one said corrosive track made of a first metallic material and at least one further thin film track made of a second, different, metallic material, the tracks being arranged to provide a measurable variation in galvanic voltage in response to exposure to an electrolyte.
- 10 12. A microsensor according to claim 11, wherein the galvanic sensor comprises a plurality of said corrosive tracks and a plurality of said further tracks, arranged in an interdigitated pattern.
 - 13. A microsensor according to any preceding claim, comprising a resistance thermometer sensor, a platinum resistance thermometer for example, arranged for measuring a temperature in the area in which the microsensor is mounted.
 - 14. A microsensor according to any preceding claim, wherein the corrosive tracks are made of a metallic alloy.
 - 15. A microsensor according to claim 14, wherein at least one corrosive tracks are made of an aluminium alloy.
- 20 16. Apparatus comprising a metallic component made from a metallic alloy in bulk form and a microsensor according to claim 14 or 15 mounted in situ adjacent a location in the component for detecting corrosive media acting on the bulk alloy,
- the bulk alloy having a main metal constituent which is the same as the main metal constituent of the track alloy, and at least one alloying metal constituent which is the same as the alloying metal constituent of the track alloy.
 - 17. Apparatus according to claim 16, wherein the proportion of the alloying constituent in the track alloy is similar to the proportion of the alloying

10

- 3 -

constituent of the bulk alloy, to within 3% of the total constituents of the bulk alloy.

- 18. Apparatus according to claim 16, wherein the proportion of the alloying constituent in the track alloy is similar to the proportion of the alloying constituent of the bulk alloy, to within 1% of the total constituents of the bulk alloy.
- 19. Apparatus according to any of claims 16 to 18, further comprising a second metallic component made from a different metallic alloy in bulk form and a second microsensor according to claim 14 or 15 mounted in situ adjacent a separate location, which is in the second component, for detecting corrosive media acting on the different bulk alloy,

the different bulk alloy having a main metal constituent and at least one alloying metal constituent,

the second microsensor having at least one thin film track made from a metallic alloy which is different to the metallic alloy from which the at least one track of the first-mentioned microsensor is made and having a main metal constituent which is the same as the main metal constituent of the different bulk metallic alloy, and at least one alloying metal constituent which is the same as the main alloying metal constituent of the different bulk metallic alloy.

- 20 20. An aircraft including apparatus according to any of claims 16 to 19.
 - 21. A method of manufacture of a microsensor according claim 14 or 15, comprising depositing the alloy of said at least one thin film track onto a substrate to form a thin film and annealing the thin film to encourage metallic grain growth.
- 25 22. A method according to claim 21, wherein the depositing step comprises sputtering the alloy of the said at least one thin film track onto the substrate.
